-------------------	-----------------------------

EDUCATION

University of Florida

Ph.D. in Food and Resource Economics	May, 2021
• Specialization in development economics	
B.A. in Economics	May, 2016
• <i>Cum Laude</i>	

RESEARCH

Evaluations

Over the last decade, I have led more than 100 evaluations of international development programs across 25+ countries in Sub-Saharan Africa, Asia, the Caribbean, and Middle East. This work has supported more than 70 governmental and non-governmental organizations around the world, including USAID and The Millennium Challenge Corporation, The International Rescue Committee, BRAC, World Vision, Catholic Relief Services, and Water for People, among many others. Although my expertise is largely in water and food security, I have evaluated projects focused on conflict mitigation, biodiversity conservation, climate resilience, tourism development, teacher training, smartphone applications, and a variety of other sectors.

Publications

My research has been published in leading peer-reviewed development journals including World Development and PLOS Water. In particular, my contributions to experiential water insecurity measurement has contributed to the development, validation, and adoption of the Water Insecurity Experiences (WISE) Scales, which are now used by more than 100 organizations and governments around the world. Please visit my website for a full list of publications and reports.

Presentations

I have presented my research and work to a wide audience. I regularly speak at WASH sector conferences and gatherings, including Stockholm World Water Week, UNC Water and Health Conference, Northwestern University's Water Symposium, charity: water's Local Partner Summit, as well as African and Asian NGO workshops focused on tackling local challenges through research and measurement. In addition to these technical settings, I have extensive experience speaking to general audiences and leveraging research findings to enhance fundraising and donor engagement.
